

Clinical Research

For the past 15 years, Migun has devoted its time and resources on research and development to produce the world’s finest alternative health products. As part of its development effort, Migun products have been clinically tested at four major hospitals in China and two university hospitals in Korea. Currently, a major U.S. University School of Medicine is performing an extensive study on the health benefits of Migun products. As part of their development efforts, Migun has received 90% positive results from clinical studies.

90%

ChungNam University

90.2% of patients reported improvement from chronic muscle and bone pain and discomfort.

95%

Peking Hospital

95% of ill patients reported improvement. Migun thermal massage bed was highly recommended.

90%

ChungIL Hospital

90% of ill patients reported improvement.

88%

DongIn University Hospital

87.6% of ill patients reported improvement. This study proved that Migun thermal massage beds using helium gas can penetrate thermal energy up to 70 mm deep into patients’ body.

2x

Peking University

The thermal energy from Migun thermal massage bed is twice as strong compared to other thermal products.

The University of California, Irvine, College of Medicine

The college is currently performing an extensive study on the health benefits of the Migun Thermal Massage bed.
